

# GPS\ GLONASS FLEET MANAGEMENT SYSTEM

## ABOUTUS

Corporate group TechnoKom is manufacture and provider of satellite based tracking systems for commercial and personal applications.

Our company has more than 20 years of experience in radio systems engineering and today it is a recognized leader in the design and manufacture of GPS/GLONASS satellite tracking systems and monitoring of vehicles and personnel in the Russian Federation.

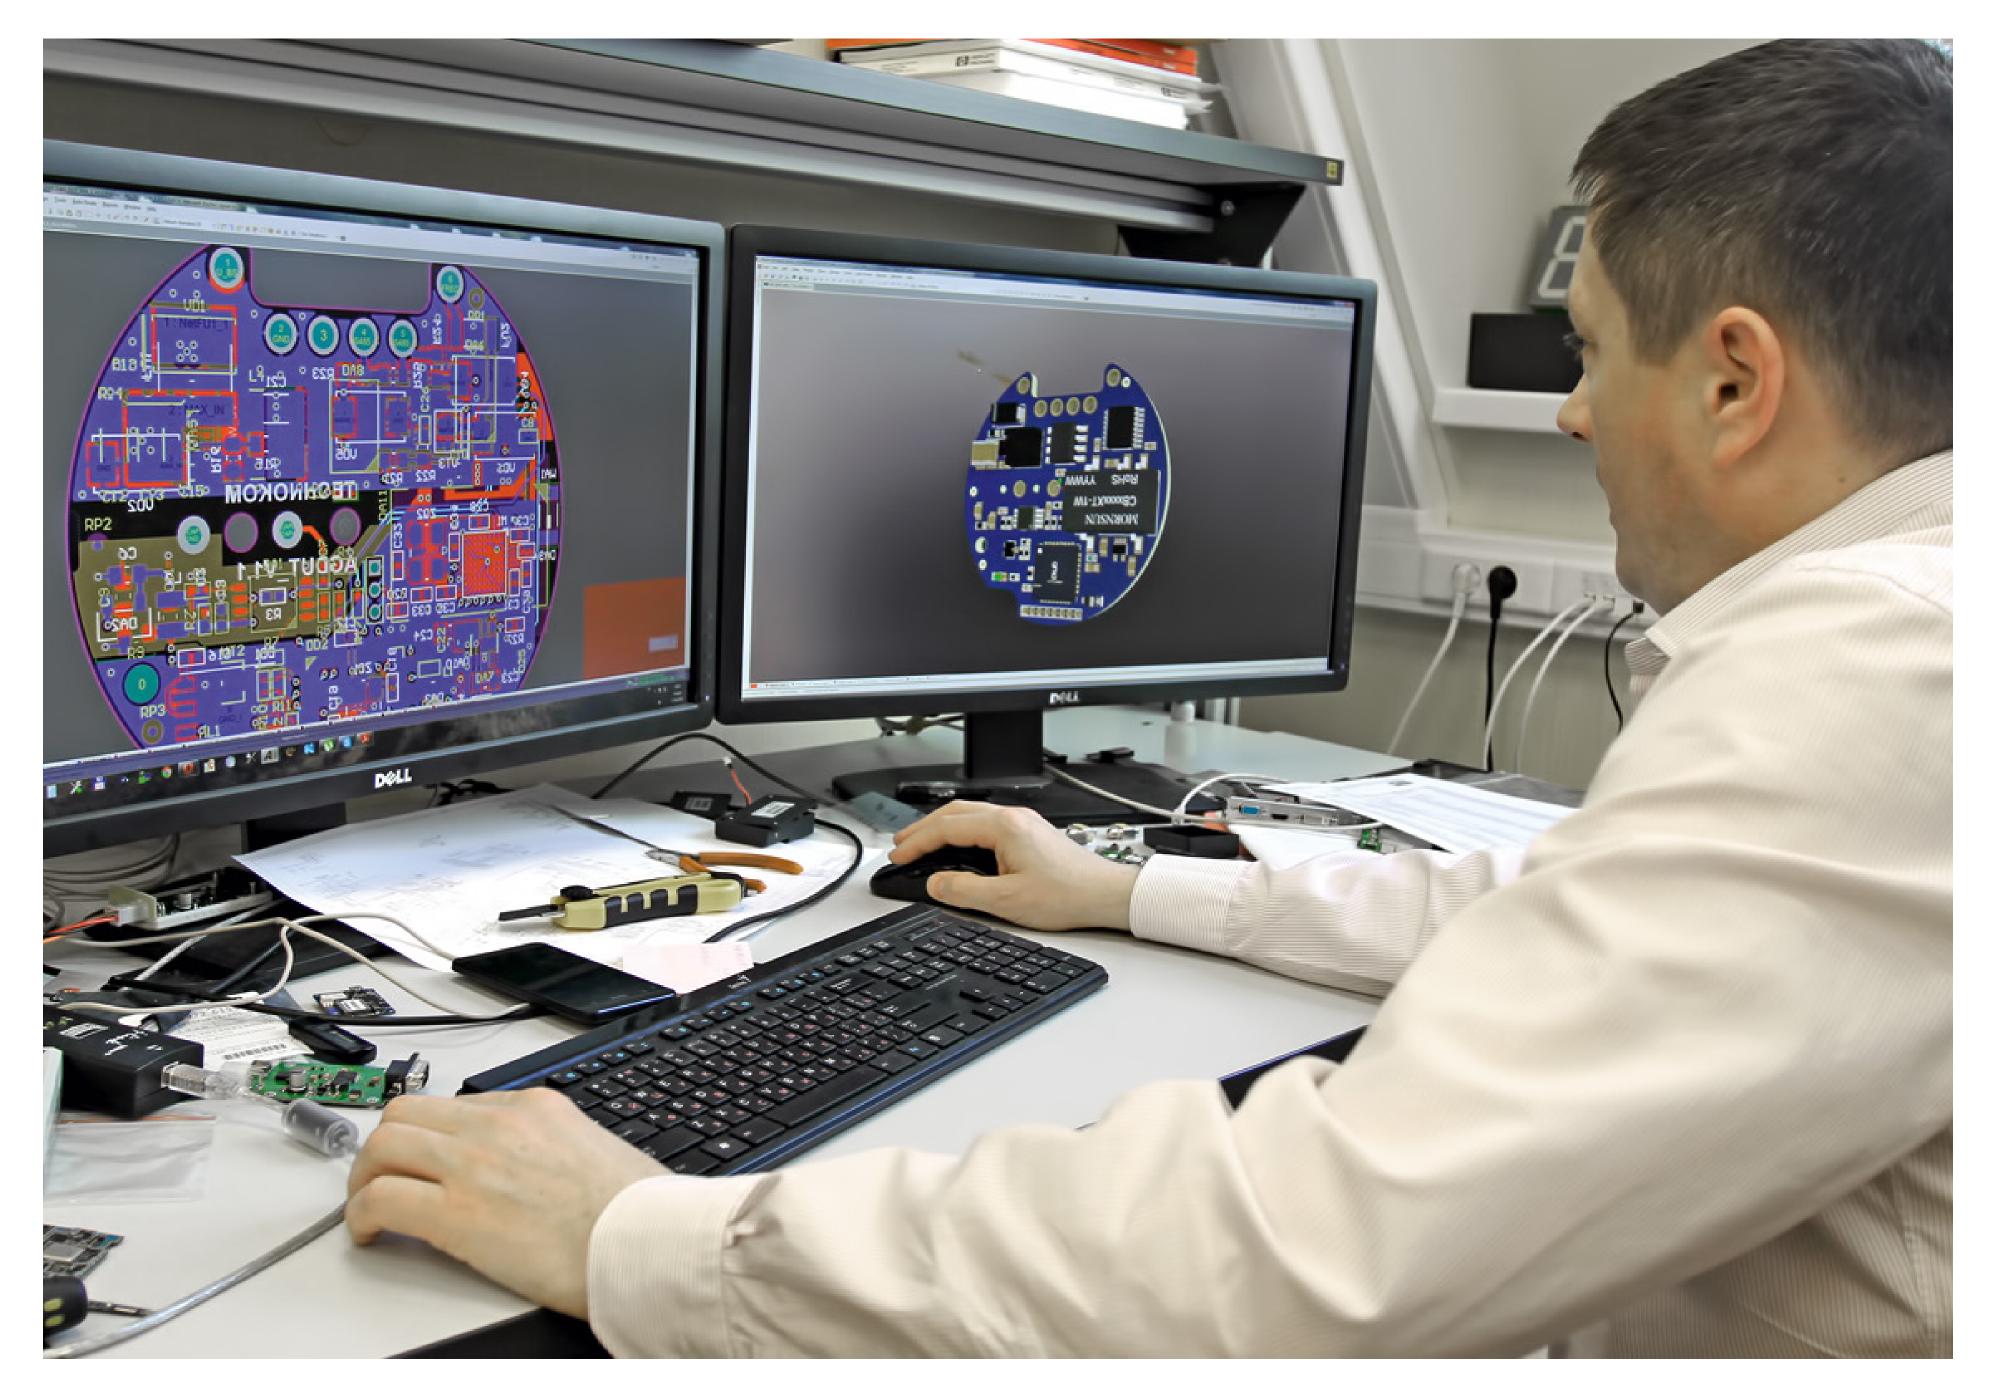

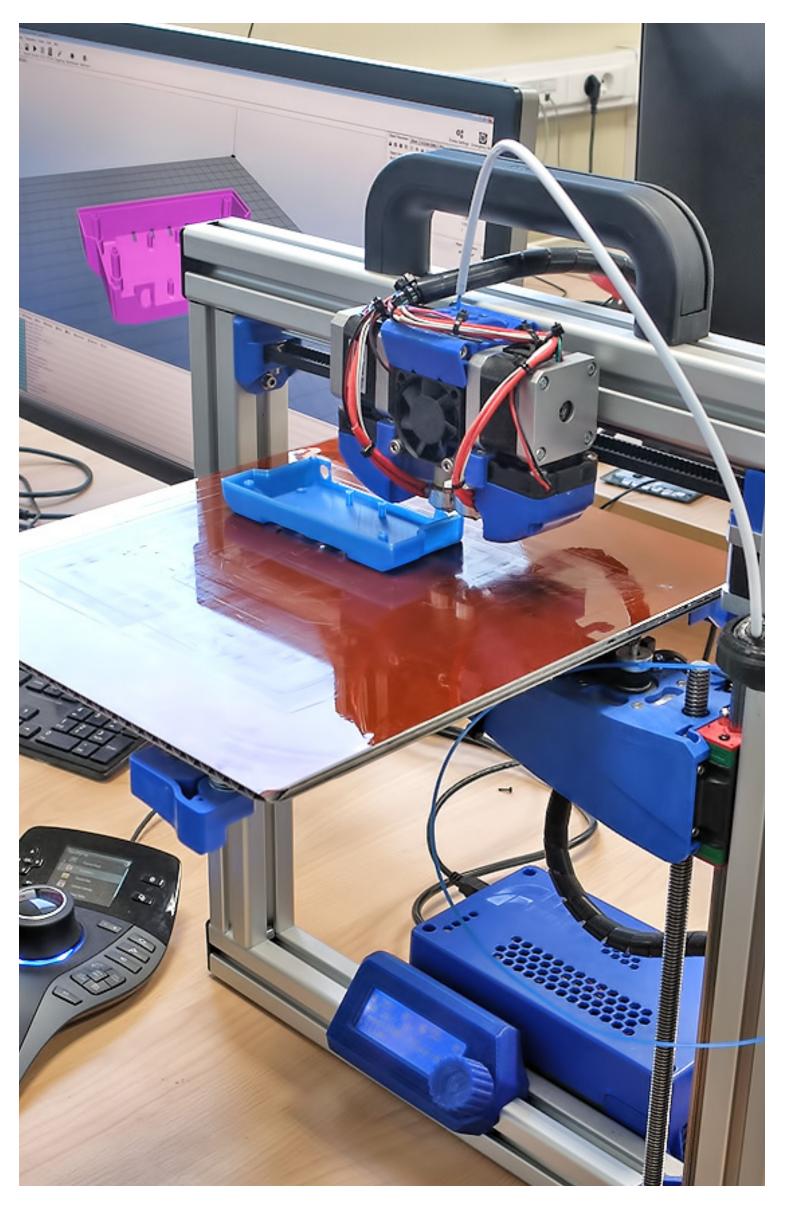

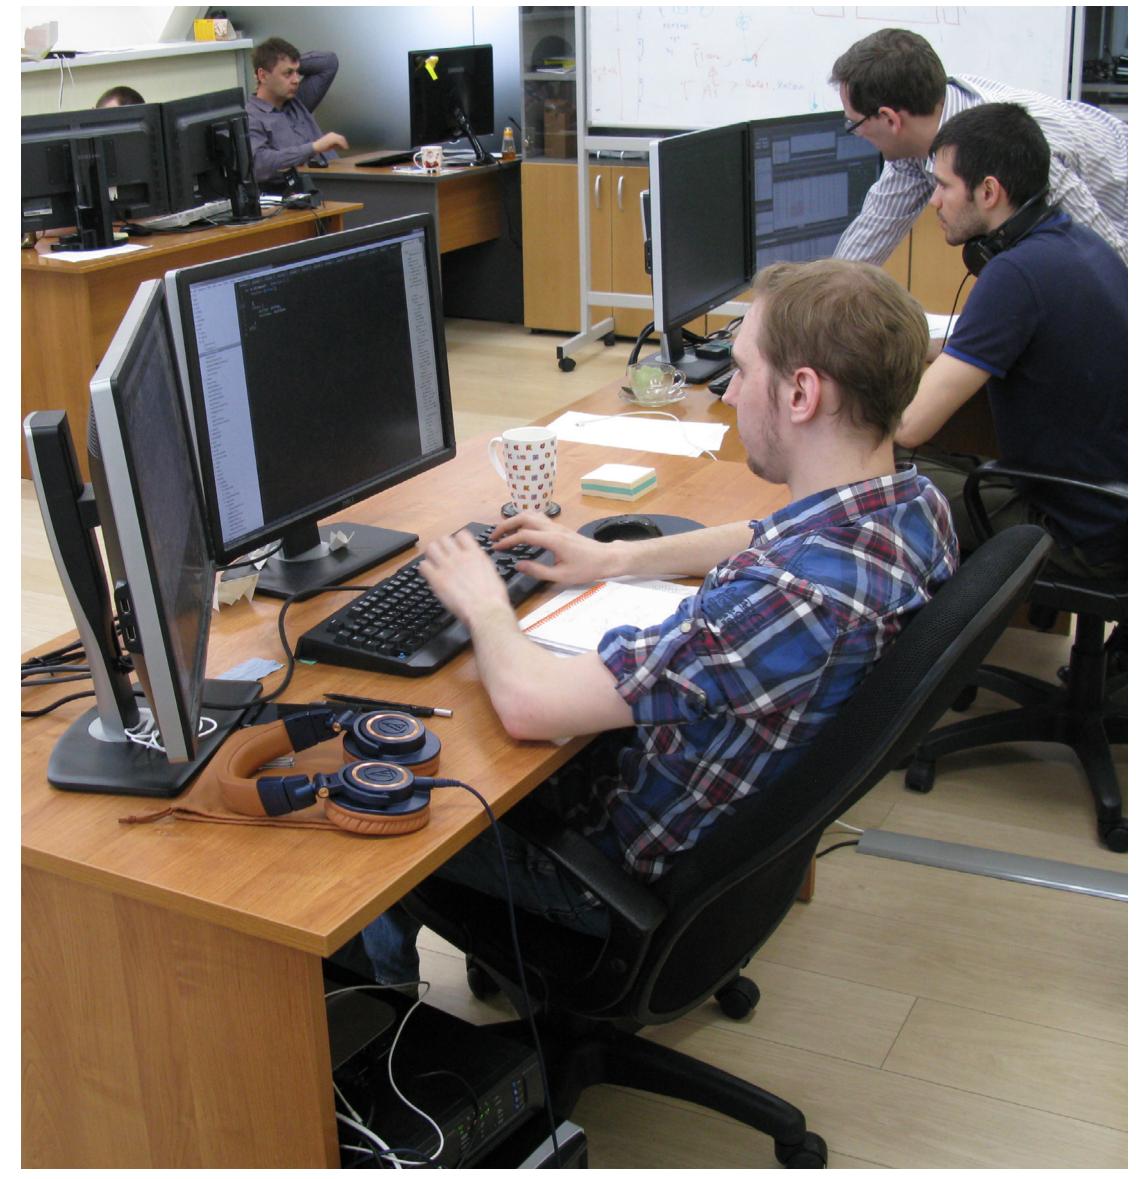

## EVOLUTION

Established in 1993 as a small production company eventually it developed into a concern of companies united by a common purpose, which formed the corporate group TechnoKom.

Over the years company's specialists accumulated extensive practical knowledge indesignand production of various electronic devices and systems.

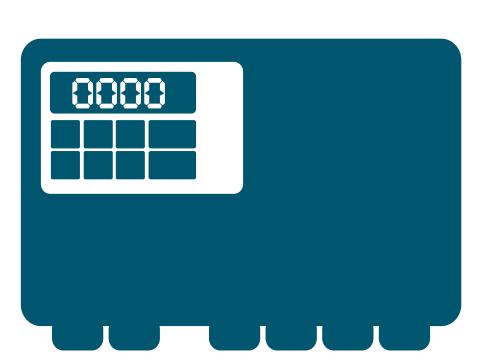

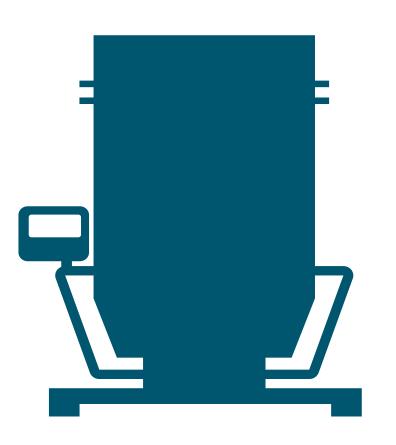

## PRODUCTION HISTORY

1993

1996

1998

2002

2003

Company foundation on the base of the Radio Technical Systems Department of the South Ural State University.

Development of «TeploKon» heat meters for industrial application.

Development of industrial weight measuring and dosing system for bulk stocks.

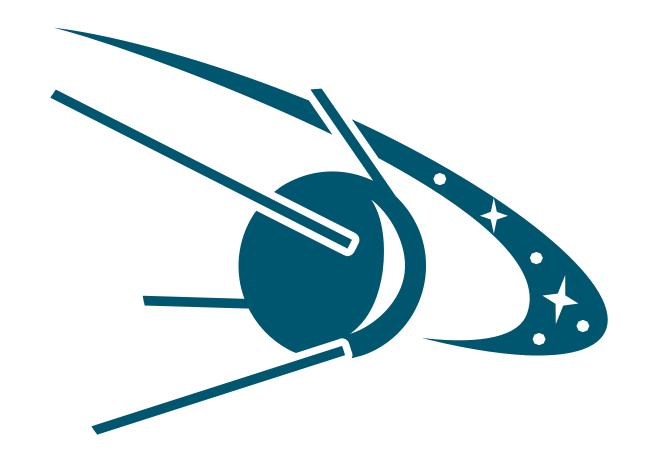

Researches on complex automation of asphalt plants.

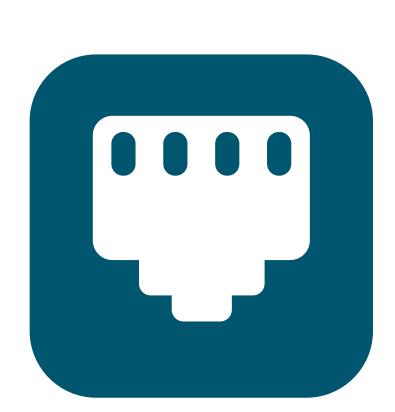

Development of high precision automatic road scraper dump leveling system "Horizont".

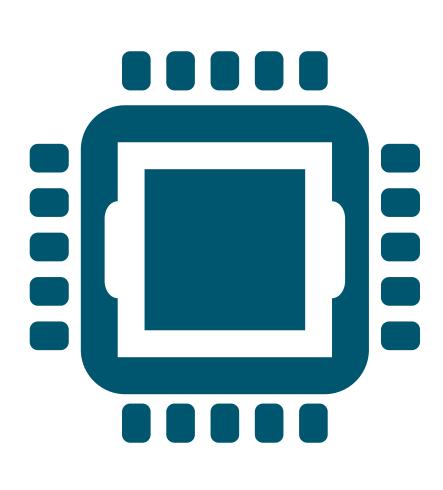

## PRODUCTION HISTORY

2004

Introduction of GPS/GLONASS AVL and fleet management system «AutoGRAPH»

2005

Development of Ethernet monitoring and control units for Internet access providers.

2009

Running own fully automated full-cycle SMD production line.

2010

Development of data transmission system units for public utilities and gas-oil industry.

2013

Introduction of fuel level sensors "TKLS"

## WHAT WE DO NOW

Corporate group TechnoKom develops and products automatic satellite based tracking systems under the AutoGRAPH brand. We offer a range of fleet management solutions providing tracking of all kinds of vehicle, including river transport, even out of GSM area due to the internal Wi-Fi module.

For personal application we supply autonomous personal trackers which commonly used to track employees on the enterprise, old persons and kinds, as well as pets. Furthermore personal trackers are equipped with alert button to send quick notification in an emergency. To provide private vehicle security, we offer anti-thief beacons intended to send vehicle exact coordinates and detect unauthorised motion starting.

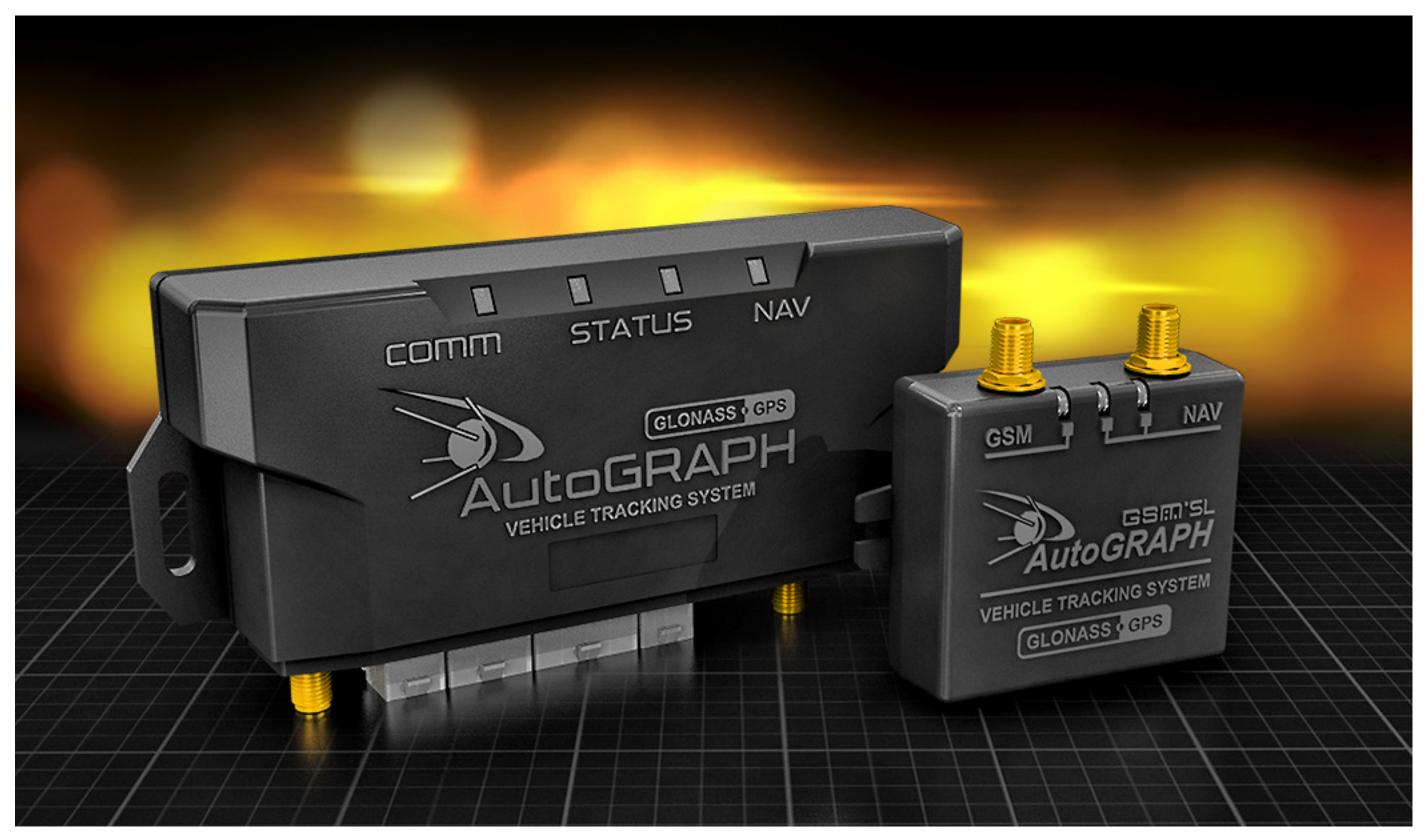

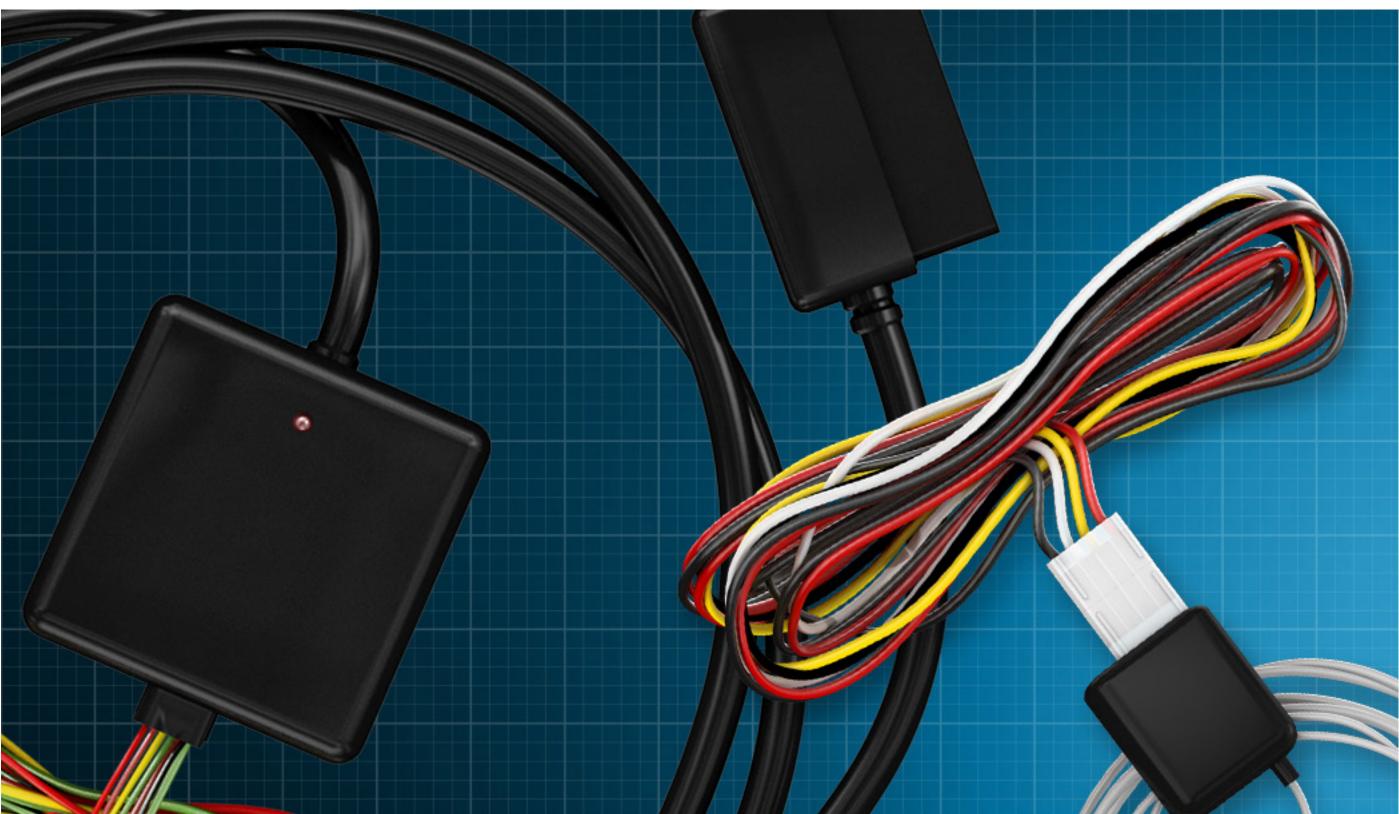

## WHAT WE DO NOW

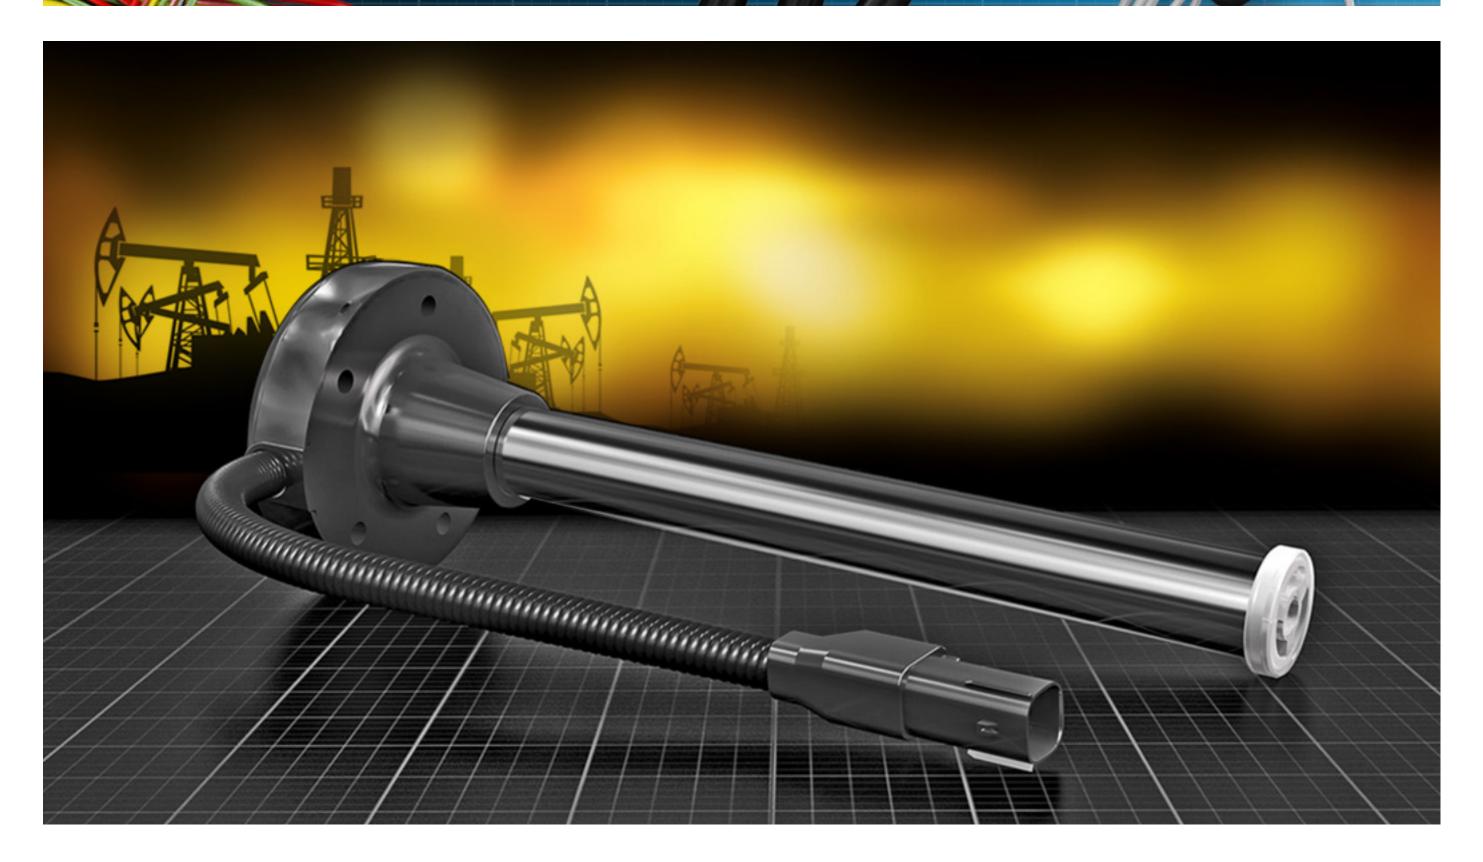

We offer powerful solution for professional drivers, including taxis, with AutoGRAPH-NAVIGATOR drive assistant and navigation tablets providing wide range of functionality, as well as routing, messaging, task management and etc.

For public transport we supply informational displays intended to simplify public transport management providing real-time vehicle tracking and control of operation, public stops announcement, continuous bus monitoring due to connected cameras and etc.

Great number of peripheral equipments such as fuel level, RPM, temperature sensors, CAN bus and OBD-II Line diagnostic adapters and identification cardreaders, delivered by Corporate group TechnoKom, provide customers with more data and extend capability of AutoGRAPH system.

GPS\ GLONASS FLEET MANAGEMENT SYSTEN

## WHAT WE DO NOW

We develop high-scaled multi-platform and multi-lingual professional AVL and fleet management software to provide fleet operators and vehicle owners with visibility into vehicle location, information on fuel usage, travelled distances, speed and etc.

We deliver desktop software intended for dispatch workstations and introducing fully configurable fleet management system, WEB based software providing easy access to the tracking data by any Internet connected computer or mobile device from anywhere in the world and mobile applications for iOS and Android running mobile devices.

## OUR VISION

Development of every product starts with the studying prospective lines and the customer needs analysis. We lead with innovation. In our production we use cutting edge equipment supplied by leading global manufacturers.

We maintain product quality at all production steps which allows obtaining world class quality of our product. Constant technical support of the world leading manufacturers and suppliers of components ensures state of the art engineering solutions.

Long-term relationship with our customers is one of the core strategies. We highly appreciate trust and respect of our customers. They are guaranty of success and further company growth.

These core features of our production and development make our product outlined, give us an edge and help to make sure that we are one step ahead of our competitors.

## NOWADAYS

Today our products are operating at this very second on various Russian and foreign enterprises.

More than 500.000 navigation trackers shipped worldwide.

More than 200 distributors in Russia Federation and abroad.

10 official regional service centres.

15 regional storages of goods.

Own fully automatic hi-tech production line.

Direct operating with global distributors and component manufactures.

#### PARTNERSHIP

We have entered into partnerships with the global leading component manufactures and providers of electronic solutions.
